

PAINT SCHEMES  
LOOKBOOK

## *PRE-DEFINED SCHEMES*

A series of dynamic plane schemes were prepared by the creative team of Evoke Aircraft Design to complement the unique curves of Shark aircraft.

The high performance super-light ImagePerfect calendered polymeric vinyl foils only 70 $\mu$  thick are applied in-house by experienced SHARK.AERO staff.

The palette covers close to 100 gloss, matt, sparkling and metallic colours to choose from. A combination with lighter shades is advised due to the temperature characteristics of composite materials.

A selection of the paint scheme and colour palette should be finalised 4 months before your aircraft delivery.

## SOPHISTICATED LIQUID FOIL SCHEMES

SHARK.AERO and our partners have developed a technology to design individual and increasingly complex graphics paint schemes to be modelled upon Shark aircraft.

By using premium 3M and Oracal cast wrapping films we ensure the best quality, longest life time and smooth 3D shaping. Solid-colour schemes are plotter-cut from coloured films. More complex graphics with colour gradients are printed on white films, coated with a protective lamination layer and plotter-cut to a desired shape. Cast graphic film or Scotchcal cast laminate are applied in this case.

During the design phase of a new paint scheme SHARK.AERO staff provide guidance to follow required technology processes including limitations of dark colour shades and design on critical parts of the aircraft due to the temperature characteristics of composite materials.

Each paint scheme is individually adjusted according to customer's wishes creating unique and stunning designs attracting not only the plane spotters. Feel free to create your own dream aircraft.

COMPLEX SCHEMES ARE PRINTED ON WHITE FILM AND CUT TO A DESIRED SHAPE
